Doctoral Dissertation

Delegatable Anonymous Credentials from Mercurial Signatures

Introduced a new type of digital signature, called a mercurial signature, and constructed first efficient delegatable anonymous credential (DAC) scheme. Extended mercurial signatures to allow messages of unbounded length. Constructed DAC scheme for multiple certification authorities.

Brown University Library 2019. 202 pgs.

Master's Research

Conducted research on partial differential equations, such as mean curvature flow and the Ricci flow, used in Richard S. Hamiton's program for solving the Poincaré Conjecture (Millennium Prize Problem). Advisor: Richard S. Hamilton
